

Rule of Thirds

This refers to an imaginary grid drawn across a photo area that breaks the image into nine equal squares. The best focal point for subjects is at the intersection of these lines with secondary emphasis being seen along the lines themselves.

Homework

Over the week, explore the rule of thirds.

Start by taking a photo of a subject from the centre of your camera. Look at your photo and consider what it would look like if you moved it to work within the rule of thirds.

If you haven't already, check your camera manual to see if you can display a "grid" or "thirds lines" within either your live view mode or on your review screen.

Print, or bring in your photos digitally to review with your mentor next week.
